

Task 2: Deploy a Virtual Machine & Install Web Server

Objective

Launch a Google Cloud Virtual Machine and configure an Apache Web Server.

Steps Performed

1. Step 1: Created a Virtual Machine

VM Name: cloud-vm-task2

Operating System: Ubuntu

Machine Type: e2-micro

2. Step 2: Configured Firewall Rules

Enabled HTTP traffic (Port 80) to allow web access.

3. Step 3: Installed Apache Web Server

Commands Used:

```
sudo apt update
```

```
sudo apt install apache2 -y
```

```
sudo systemctl start apache2
```

```
sudo systemctl enable apache2
```

4. Step 4: Created a Custom Web Page

```
echo 'Hello from Cloud VM' | sudo tee /var/www/html/index.html
```

5. Step 5: Verified Apache Status

```
sudo systemctl status apache2
```

6. Status: active (running)

Deliverables

➤ Public VM IP

35.207.209.203

➤ Live Website URL

<http://35.207.209.203>

Screenshots

1. VM Instance Details

The screenshot shows a web browser window with the Google Cloud console interface. The address bar displays the URL `https://console.cloud.google.com/compute/instances/252072092021`. The main content area shows a terminal window with the text `Hello from Cloud VM`, indicating that the VM is running successfully.
